Amazon SES
Use a WorkMail mailbox to test your SES campaigns. Click here to set up your free trial and learn how to configure Outlook.
Amazon SES > Configuration: Identities
Identities
The Identities panel lists your domains, subdomains, and email address identities. All identities must be verified before you use them to send email in Amazon SES. Learn more. The Recommendations panel lists high-impact email authentication issues found for the identities you select and check for recommendations. Learn more

Create identity
An identity is a domain, subdomain, or email address you use to send email through Amazon SES. Identity verification at the domain level extends to all email addresses under one verified domain identity.
Identity details info
Identity type
Domain
Email address
Sending email from an email address identity without having the domain identity verified will result in your message being quarantined or rejected depending on the domain's DMARC policy. Learn more about DMARC and how to look up a domain's DMARC policy.
